Cable Arm

INTRODUCES ITS NEW GIANT

An Environmental Bucket with a 100 yard³ (75 meter³) load capacity that has been reduced to 70 yard³ (53.5 meter³) by adjusting its slotted plates. This adjustment allows for a larger footprint area necessary for quick, precise shallow face dredging.

The opened center cross-bar has been set to a vertical position while the bucket is open. This enables the cross-bar to act as a rudder while lowering the bucket into the water column. A stiffener with multi-penetration has been inserted into the cross-bar plate. The cross-bar and stiffener combination increases strength and removes twisting.

***Designed for flat rack container, world wide shipping.
